

UCLA Emergency Preparedness Standard Clinic Disaster Kits

Disaster Kits are intended for use immediately following a sizeable earthquake for activities such as opening jammed doors (crowbar), clearing light debris (gloves, dust masks, goggles) and working without lights (light sticks, flashlights). The plastic bags can be utilized in the event the toilets stop working. It is up to the clinic to select the kit that best suits their needs.

Additional items may be purchased at the discretion of the clinic as needed (e.g. food, water etc.) Keep in mind that some items may expire so it is important if you add perishable items that you routinely check the kit and replace expired items as needed.
